No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The cDNA was isolated from a human liver cell cDNA library, and from tissue localisation studies has been found to be expressed only in transporter (EMBL Accession No. Y09945) which is involved in drug excretion, and this sequence may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.

OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange across the loan tertiary active transport involving exchanges for another organic anion. Identical except at the C-terminal end. hOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis
                                                                                                                    of diseases associated with inappropriate hOAT expression.

CC thrombolytic activities; receptor or ligand activities; or may be completed in oncogenesis, cancer cell proliferation or metastasis.

CC bepending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cc cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cc disorders), chronic inflammatory conditions (e.g., asthma or arthritis), cc proliferative retinopathy, atherosclerosis, coronary heart disease, cc arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal cc vascular growth. Polypeptides involved with tissue regeneration and cc repair (or nucleic acids encoding them) may be used to promote wound cc immunomodulatory activities may be used in the treatment of viral, cc bacterial and fungal infections and ulcers), while those with cc polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to cantoimmune disease or accidental damage. The polypeptides and nucleotides autoimmune disease or accidental damage. The polypeptides and in drud autoimmune disease or accidental damage. The polypeptides and in drud
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           myeloid cell disorder; lymphoid cell disorder; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antiinflammatory; antiarthritic; haemostatic; antiarteriosclerotic; cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial; antifungal; vulnerary; antiulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; cytokine; cell proliferation; cell differentiation; growth factor; haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0825-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer – \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; ABA08976

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is transporter and ion channel-10 (TRICH-10) CC protein. TRICH is used as vaccine. TRICH is useful for treating a disease CC or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, CC cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth CC disease, Duchenne muscular dystrophy, angina and hypertension, eurological disorders including Alzheimer's disease, amnessa, bipolar cd disorder, dementia, depression, epilepsy, ischaemic cerebrovascular CC disease, stroke, cerebral neoplasms, Pick's disease, Huntington's disease and Parkinson's disease, demyelinating diseases, manestal disorders including mood, anxiety, Schizophrenia and seasonal affective disorder was a sease and Parkinson's disease, demyelinating diseases, polymyositis, communicated disorders including mood, anxiety, Schizophrenia and seasonal affective disorders including and sthma and immunological disorders including AIDS, adult respiratory distress syndrome (ARDS), allergies, concluding AIDS, adult respiratory distress syndrome (ARDS), allergies, syndrome, systemic lupus erythematosus and other diseases, including sickle cell anaemia, Wilson's disease, cataracts, infertility, pulmonary constrains and viral, bacterial, fungal, helminthic and protozoal confections. TRICH DNA is useful in gene therapy and in diagnostic curroses.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequences given in AABA7271-76 represent human organic anion transporter (hOAT) polypeptides. hOAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary cell membrane transport involving exchange of another organic anion. hoAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hOAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-JUL-2000; 2000WO-US18980.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                leukaemia.
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, the inmunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system fiseases, such as localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system disease, amyotrophic Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

Novel secreted human proteins useful for stimulating blood cell proteins in patients receiving cancer chemotherapy, treating bone xx marrow transplantation patients and for healing fractured bones . Scalim 14; Page 72; 74pp; English.

CC AAB19393-B19407 represent secreted human proteins. The secreted proteins care useful in assays to determine their biological activities. The cc types which express the proteins. The polynucleotide molecules can be cc used as biomarkers to identify tissues or cell cused as biomarkers for tissues or chromosomes and to elicit immune cc treatment of diseases associated with altered expression of these cc platelet disorders, stem cell disorders, setem cell disorders, osteoporosis or osteoarthritis, con proteins are also useful for prevention or treatment of cc platelet diseases and neuropathies, for healing fractured bones can to induce cartilage and/or bone growth in cosmetic plastic surgery. Cc treatment of lung or liver fibrosis, for stimulating blood cell composition or treatment of the proteins are also useful for gut protection or regeneration, for the generation in patients receiving cancer chemotherapy and for treatment of cof bone marrow transplantation patients.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, are useful communosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotide or polynucleotide communosuppressant and cytostatic activity, peripheral nervous composition containing a polypeptide or polynucleotide communosuppressed to treat diseases of the peripheral nervous cytostam diseases, such as compositive and central nervous system diseases, such as compositive and central nervous system diseases, such as compositive activity of the activities and containing the activities and systems suppression, commune system suppression, and thrombolytic activity, chamotactic/chemokinetic activity, haemostatic commune systems suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, cancer diagnosis and therapy, drug screening, commune systems suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, commune system suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, cancer diagnosis and therapy, drug screening, and the system suppression activity, cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-JAN-2000; 2000US-0488725.

The polynucleotides CC into a host cell and culturing the cell to express the protein. The polypeptides in diagnostic assays and its complementary sequences may also be used as antigens in the production of antibodies CC polynucleotides and its complementary sequences may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and CC activity. The polypeptides and nucleic acids may also be used as antigens in the production of antibodies complements, to modulate cytokine and cell proliferation activity, to middlate cytokine and cell proliferation activity, to creatment of creatment of arminus stimulation or suppression (e.g. for the treatment of creatment of treatment of an arminus and culcimmune disorders such as multiple sclerosis, creatment of provided and insulin-dependent diabetes), to modulate chemotactic and inhibin activity (e.g. for the creatment of treatment of Parkinson's disease, Huntington's disease and Alzheimer's creatment of provided activity, to modulate chemotactic and chemokinetic activity, to controlling condulate haemostatic and thrombolytic activity, to modulate can be controlling and activity, to modulate chemotactic and chemokinetic activity, to modulate can be controlling and activity, to modulate inflammation and to inhibit tumour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human placental organic anion transporter, designated OAT4. OAT4 has nephrotrophic activity. The OAT4 protein and encoded gene are useful in studying causes of abnormality, including the application of a variant nucleic acid as a probe to detect the presence of a gene encoding the transporter OAT4, or to identify or the presence of a gene encoding the transporter OAT4, or to identify or quantify such gene, and in developing drugs to prevent or treat various quantify such gene, and abnormal footal growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   placental organic anion transporter gene and encoded polypeptide OAT4, useful in studying causes of abnormality, and in developing drugs to prevent or treat various kidney diseases and abnormal fetal growth -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; Page 26-28; 32pp; Japanese.

```
The present sequence is human protein with hydrophobic domain, Hp03613.
The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with the control of interest of the polypeptide with the control of the polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host control of the polynucleotides may be used and its complementary sequences may also be used as DNA probes in the polynucleotides and the used in gene therapy. The polypeptides may control of the didentify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional supplements, immune stimulation or suppression (e.g. for the treatment of microbial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAE06571
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qγ

XX Nucleic acids encoding a range of human polypeptides, useful in genetic PT vaccination, testing and therapy -

XX Claim 20; Page 597; 765pp; English.

XX The invention relates to novel human secreted polypeptides. The CC polypeptides and antibodies to the polypeptides are useful for CC determining the presence of or predisposition to a disease associated CC with altered levels of polypeptide. The polypeptides are also useful for CC identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent CC physiological interactions of the polypeptides. Vectors comprising CC the nucleic acids encoding the polypeptides and cells genetically CC engineered to express them are also useful for producing the proteins. They may be used to therapy, and can be useful in genetic vaccination, testing and concease stem cell proliferation; to regulate haematopoissis; and in CC increase stem cell proliferation; to regulate haematopoissis; and in treatment of leukaemias. AAA/29510-AAA/33/34 represent the amino acid sequences of novel human secreted proteins of the invention.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ISSUE SPECIFICITY.
                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: FRACILITATIVE GLUCOSE TRANSPORTER. THIS ISOFORM LIKELY MEDIATES THE BIDIRECTIONAL TRANSFER OF GLUCOSE ACROSS THE PLASMA MEDBARAE OF HEBATOCYTES AND IS RESPONSIBLE FOR UPTAKE OF GLUCOSE BY THE BETA CELLS; MAY COMPRISE PART OF THE GLUCOSE-SENSING MECHANISM OF THE BETA CELL. MAY ALSO PARTICIPATE WITH THE MECHANISM OF THE BETA CELL. MAY ALSO PARTICIPATE WITH THE NA(+)/GLUCOSE COTRANSPORTER IN THE TRANSCELLULAR TRANSPORT OF GLUCOSE IN THE SMALL INTESTINE AND KIDNEY.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: IN EMBRYO, EXPRESSED IN ENDODERM LAYER OF YOLK SAC AND LIVER PRIMORDIUM.
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY GINCOSE SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY GINCOSE

THIS ISOFORM LIKELY MEDIATES THE BIDIRECTIONAL TRANSFER OF GLUCOSE ACROSS THE PLASMA MEMBRANE OF HEPATOCYTES AND IS RESPONSIBLE FOR UPTAKE OF GLUCOSE BY THE BETA CELLS; MAY COMPRISE PART OF THE GLUCOSE-SENSING MECHANISM OF THE BETA CELL. MAY ALSO PARTICIPATE WITH THE NA(+)/GLUCOSE COTRANSPORTER IN THE TRANSCELLULAR TRANSPORT OF GLUCOSE IN THE SMALL INTESTINE AND KIDNEY.

GLUCOSE IN THE SMALL INTESTINE AND KIDNEY.

SUBCELLULAR LOCATION: INCEGING INCEDENCY AND BETA-PANCREATIC ISLET CELLS.

SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TRANSPORTER SUBFAMILY.
